

Camping/Survival Tips Website Application

Conceptual Design Document (DLBCSPJWD01)

Zehra Demir, Matriculation: 92130119

1. Project overview: The Camping/Survival Tips Website Application aims to offer outdoor enthusiasts useful information, advice, and resources for outdoor adventures, camping, and survival. To ensure a fun and interactive user experience, the application will make use of contemporary web technologies on both the frontend and backend. Users will have access to responsive design, dynamic features, and the ability to communicate with the server backend.

2. Architecture Diagram:

3. Target User Group: The application's target user group includes individuals interested in camping, survival, and outdoor activities, ranging from beginners to experienced adventurers. Families, solo travelers, and nature enthusiasts seeking reliable information and a platform for sharing their experiences will benefit from this application.

4. Technologies: React will be used to create the application's frontend. User interface will be developed using HTML, CSS, and JavaScript, and React components will provide dynamic and interactive elements. Node will be used in the backend's development with Express.js. Articles will be stored in MongoDB.
